

# SelectShot™

Want control of your fertilizer?  
Select your application, dictate results, maximize your seed choice

Start your planting season with the recommended dose of liquid product at the seed level. Instead of gallons per acre, SelectShot delivers the set dose per seed right where it's most effective.

*As the seed sensor is triggered, the exact dose of liquid product is delivered based on the settings entered on your existing V.T. Monitor.*

You already have the planter, just add the CapstanAG SelectShot system and optimize your yield with simple inputs.

**Placing the product in the ideal location, SelectShot has been shown to improve yields and can reduce inputs.**

## SelectShot Features

- OPTIMIZED INPUTS, MAXIMIZED YIELDS
- TURN COMPENSATION COMPATIBLE
- KEYFOB CONTROLLED DIAGNOSTIC TESTING
- SAME DOSE PER SEED INDEPENDENT OF POPULATION
- RUN IN FURROW ACROSS DIFFERENT CROPS WITH THE SAME PLANTER AT THE TOUCH OF A BUTTON

# SelectShot™

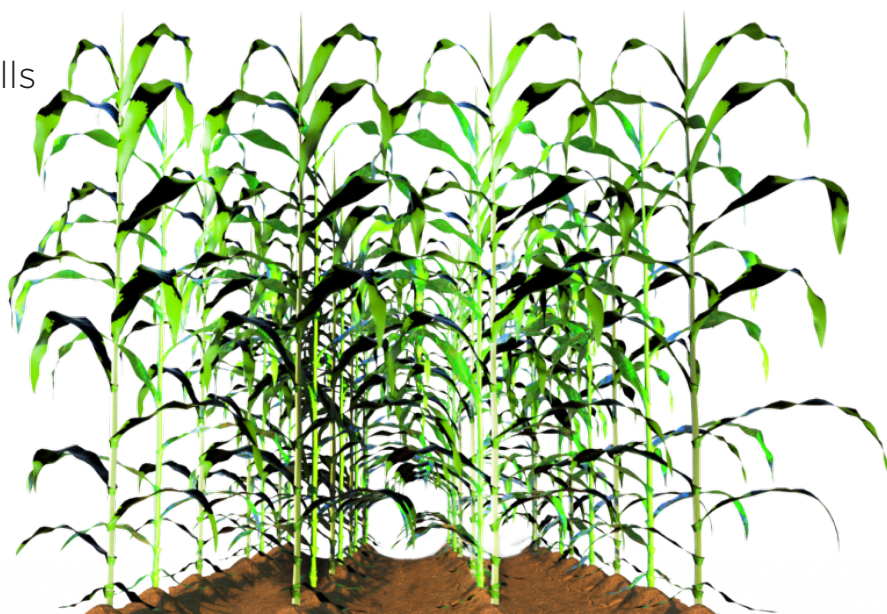

Want control of your fertilizer?  
Select your application, dictate results, maximize your seed choice

## Performance

Consistent Application Rate Independent of Speed or Population  
Optimal Liquid Product Placement  
Existing V.T. Compatible  
Valve Diagnostics

## Benefits

Optimize Inputs  
Maximized Yield Potential  
Proper Nutrient per Seed  
More Time Between Tank Fills  
Improved Plant Health
